## Al Jassmiya Farm, Doha – Qatar

### Project overview

Doha-Qatar, Irrigation designer, gave careful thought to choosing the best needs for the Al Jassmiya Farm project. After evaluation the contractor chose the best of the K-Rain® line; the 4" NP Spray, the ProSeries 150 Valve, the RPS™ 75, the ProSport® and the Pressure Compensating Tree Bubblers. These products went above and beyond performance standards and made it easy for the team to set distribution patterns quickly and accurately.

The contractor, Urban Landscapes, chose the K-Rain® ProSeries 150 for its reliability. The ProSeries 150 Valve is designed to provide long life and outstanding performance while focusing on delivering water savings, little-to-no low-head drainage and product longevity in sandy conditions. The NP Spray also fits this project by offering a narrow profile body with retrofit which is also leak-free.

The RPS™ 75 offered a patented reverse mechanism feature that ensures continuous reverse and return during watering periods, while the ProSport® continues to ensure water distribution and provides an easy arc setting from 40° to 360°. Each product was installed effectively and efficiently.

### K-Rain products used

- ▶ 4" NP Spray
- ▶ ProSeries 150 Valve
- ▶ RPS™ 75
- ▶ ProSport®
- ▶ Pressure Compensating Tree Bubblers

### Irrigation & Landscape Contractor
