New Student Affairs Building – Qatar University

Irrigation & Landscape Contractor

▶ HCC International - Hassanesco

Project overview

The contractor chose the best of the K-Rain® line, Pro-S™ Sprays, NP Sprays with KVF Nozzles, and MiniPro® Rotors, in order to satisfy the irrigation requirements. The field team was able to set distribution patterns quickly and accurately.

For the development's irrigation needs, the contractor, HCC International, chose the K-Rain® ProSeries 200. Glass Filled Nylon with PRS for its reliability and many features. The ProSeries 200 Valve is designed to provide long life and outstanding performance. In various sections of the system, the designer was focused on delivering water savings, little-to-no low-head drainage and product longevity in sandy conditions.

Qatar University will continue to rely on K-Rain's commercial product line to deliver the results and reliability.

K-Rain products used

- ▶ 4" Pro-S™ Spray
- ▶ KVF Adjustable Nozzles
- ▶ ProSeries 200 Valve
- ▶ NP Spray 4"
- ▶ MiniPro® Rotors
